General Description

The LM293/LM393 consist of four independent precision voltage comparators with a typical offset voltage of 1.0mV and high gain. They are specifically designed to operate from a single power supply over wide range of voltage. Operation from split power supply is also possible and the low power supply current drain is independent of the magnitude of the power supply voltage.

The LM293/LM393 series are compatible with industry standard 393. The LM293 has more stringent input offset voltage than the LM393.

The LM393 is available in SOIC-8(SOP-8) and MSOP-8, TSSOP8 package, and the LM293 is available in SOIC-8(SOP-8) package.

note 2. Limits over the full temperature are guaranteed by design, but not tested in production.

3. The input common-mode voltage of either input signal should not be allowed to go negatively by more than 0.3V (at +25°C). The upper end of the common-mode voltage range is Vcc-1.5V (at +25°C), but either or both inputs can go to +36V without damages, independent of the magnitude of the Vcc.
